

awk

JULIA EVANS
@bork

awk is a tiny programming language for manipulating columns of data

I only know how to do 2 things with awk but it's still useful!

basic awk program structure

```
BEGIN { ... }  
CONDITION { action }  
CONDITION { action }  
END { ... }
```

↑
do action on lines matching
CONDITION

extract a column of text with awk

```
awk -F, '{print $5}'
```

column separator ↑ single quotes! ↑ print the 5th column

this is 99% of what I do with awk

SO MANY unix commands print columns of text (ps! ls!)

so being able to get the column you want with awk is GREAT

A few more awk programs →

sum the numbers in the 3rd column

```
{ s += $3 }
```

↑ action

```
END { print s }
```

↑
at the end, print the sum!

print every line over 80 characters

```
length($0) > 80
```

↑ condition

(there's an implicit {print} as the action)
